

### How to use the App

When you first login in to the App you can use the name 'Naruto' and any password, you will get access to a bunch of the firebase data this way. Next to add a friend go to the leaderBoard VC, press add friend and enter Apollo or Test or Tester or nope because I have already made these accounts. The Study VC is pretty straightforward just change the duration of the study/break time and start the timer. The stats and achievements VC are view only.

Also for some reason I had a lot of trouble with xcode not liking my project, on xcode 12.4 it would break spontaneously even though on xcode 12.2 it was fine. If doesn't build for you please email me and I can send you a screen recording of the app.
